

Speech Synchronization Test

M. Florencia Assaneo 2021

You need to run the mainExperiment.mat file to apply the Synchrony Test as described in Lizcano et al. 2022. All other mat files are functions called by the main experiment. You have to select one of the two available versions of the test, this should be explicated by the researcher in the mainExperiment file.

The script generates one folder per subjects within the folder named data. Each subject's folder contains 4 audio files. Two correspond to the trainings and the files called output1 and output2 are the ones corresponding to the main experiment (the one used to estimate the phase locking value).

For any doubt about the test email Florencia at : fassaneo@inb.unam.mx
